

# MYLIUM

**Looking for a relevant and innovative internship?**

[www.mylium.nl](http://www.mylium.nl)

**Mylium** is a start-up company that creates quality fabrics using **mycelium technology** based in Wageningen, The Netherlands.

In nature fungi are the circular motor that create value from biomass residues. At Mylium we use fungal growth to upcycle waste streams into biobased and plastic-free textiles. Our next step is to increase the durability by means of a Green Chemistry post-treatment step. Are you up for the challenge?

### **Who do we look for?**

We are currently looking for 2 interns on product development with:

- A background in Molecular & Cellular Life Sciences, Organic Chemistry, Physical Chemistry, Materials Science, or a similar study.
- An affinity for creating materials and testing their properties with a focus on applied research.

Are you:

- eager to have a positive impact on the world?
- ready to pull up your sleeves and start experimenting?
- excited to work in a small team where your input is vital for the progress of the company?
- attracted by the adventurous entrepreneurship lifestyle?

### **Interested?**

Then please get in contact! Send your CV and motivation letter to Emma Luitjens, via [emma@mylium.nl](mailto:emma@mylium.nl)
